

### CAT No. MTCG32

Moulded cable gland for metalclad consumer units fitted with RCD main switch  
To provide additional support and insulation for the incoming cables.  
Suitable for 16mm<sup>2</sup> or 25mm<sup>2</sup> double insulated, sleeved cables.

The kit comprises a 32mm insulated cable restraining gland, which is fitted by removing the knockout above the incoming terminals and fixing into position with the nut included. The incoming supply cables must be passed through the 3 aperture sealing bung  
The sequence of assembly over cables is as shown above.  
Tighten the gland and header nut when installation of incoming cables is complete.

If the incoming supply cables are to be protected by conduit this must be of the all insulated type.
